

# Special Issue on Finance and Hyperinflation

## *Financial History Review*

### Call for Papers

The *Financial History Review* considers papers for a special issue on “Historical Perspectives on Finance and Hyperinflation” to be published in 2024.

**The editors welcome submissions on topics that link inflation to financial markets and institutions, as well as to monetary policy. Examples include the following:**

**Causes of hyperinflation:** understanding the political, economic, and monetary conditions that led to hyperinflation.

**Role of financial institutions:** studying the resilience and vulnerability of banking systems and other financial institutions in light of an exogenous monetary shock.

**Impacts of inflation:** exploring the broader economic and political repercussions of hyperinflation, including effects on labor markets, wealth distribution, economic growth as well as on election outcomes and government policies.

**Investment landscape:** improve our understanding of how investors navigate the uncertainties of hyperinflated economies and what strategies prove most effective.

**Macroeconomic perspectives:** analyze the monetary policies, fiscal responses, and political economies of hyperinflationary crises, such as patterns, causative factors, and potential remedies for hyperinflation.

#### **PROCEDURE:**

Submissions should be original, unpublished works that are not under review at any other journal. The editors offer a fast-track review process for papers on this topic. Complete papers should be submitted directly to the *Financial History Review* by April 1<sup>st</sup> and flagged as a special issue submission. There will be no more than one round of revision allowed.

**NOTE:** Acceptance for presentation at the *eabh* conference does not imply acceptance for publication in the *Review*.
